GOTRAD MAXBLUE BLUETOOTH MODULE USER GUIDE

Introduction

The GotRad Bluetooth Module features the Maxim MAX32666 high-efficiency ARM® microcontroller and audio DSP for Bluetooth 5.1 Low Energy Radio connectivity. The GRBTM series provides an I/O breakout that allows for low cost carrier PCBs versus using the MAX32666 directly. Featuring an FCC Modular Certification, the GRBTM series enables a short prototyping cycle direct to a product that can meet FCC requirements for sale without additional certification testing.

This modular series breaks out all interfaces and features of the MAX32666 including; USB High Speed, secure digital, SPI, UART, and I2C. The module also provides an audio subsystem supporting PDM, I2S, and TDM interfaces. See the Maxim MAX32666 documentation for a complete list of peripherals.

The module comes in one of two variations depending on the antenna. The first variant is the GRBTM-ANT, which comes equipped with a low-profile surface mount chip antenna with peak performance in the 2.4GHZ BT range. Modules with on-board antennas require the physical placements and mechanical details of the integrated board to closely match the evaluation board in order to achieve the stated performance.

The second variant in the series, the GRBTM-NANT, provides a breakout pad for connecting a customer-supplied antenna to the module's RF transmission line. This variant allows for the use of the best performing and optimized antenna for your specific product requirements.

Figure 1: The GRBTM-ANT-01 module without the shield.

Variants

GotRad PN	Description
GRBTM-ANT	The GotRad Module with embedded chip antenna.
GRBTM-NANT	The GotRad Module with pad connected to the transmission line for customer antenna integration.
GRBTM-EVA	The GotRad Module, GRBTM-ANT, embedded on a development board.
GRBTM-EVNA	The GotRad Module, GRBTM-NANT, embedded on a development board populated to support an SMA terminal antenna.

Interfaces

Serial Communications Overview

- JTAG is provided as a primary means to debug the MCU by providing access to the sub-blocks of the IC.
- The module provides three instances of the UART (UART0, UART1, and UART2). The universal asynchronous receiver-transmitter interface supports full-duplex asynchronous communication with optional hardware flow control (HFC) modes to prevent data overruns. If HFC mode is enabled on a given port, the system uses two extra pins to implement the industry standard request to send (RTS) and clear to send (CTS) flow control signaling. Each UART is individually programmable. The UART supports the following features:
 - Baud rate generation with $\pm 2\%$ optionally utilizing the 7.3727MHz relaxation oscillator
 - 2-wire interface or 4-wire interface with flow control

GOTRAD MAXBLUE BLUETOOTH MODULE USER GUIDE

- 32-byte send/receive FIFO
- Full-duplex operation for asynchronous data transfers
- Interrupts available for frame error, parity error, CTS, Rx FIFO overrun, and FIFO full/partially full conditions
- Automatic parity and frame error detection
- Independent baud-rate generator
- Programmable 9th bit parity support
- Multidrop support
- Start/stop bit support
- Hardware flow control using RTS/CTS
- Maximum baud rate 4000 kB
- Two DMA channels can be connected (read and write FIFOs)
- Programmable word size (5 bits to 8 bits)
- The Bluetooth Module includes one Universal Serial Bus (USB) Host communications peripheral with a USB physical interface. The USB Host is USB 2.0 High-Speed (USBHS) compliant, capable of transfers at 480Mbps. It supports Host mode with 12 USB buffers called endpoints.
 - The following features are supported:
 - USB Device Mode
 - USB 2.0 Full-Speed (FS) 12Mbps transfers
 - USB 2.0 Hi-Speed (HS) 480Mbps transfers
 - Bulk transfers
 - Isochronous transfers
 - 11 endpoints plus Endpoint 0, each with dedicated FIFOs
 - Packet splitting and combining
 - High bandwidth IN and OUT Isochronous endpoints
 - Each endpoint has an associated FIFO with the following sizes:
 - Endpoint 0 FIFO: 64 bytes deep
 - Endpoints 1 through 7 FIFOs: 512 bytes deep
 - Endpoints 8 and 9 FIFOs: 2048 bytes deep
 - Endpoints 10 and 11 FIFOs: 4096 bytes deep
 - Supported interrupts include:
 - Interrupts for each IN endpoint from Endpoint 0 to Endpoint 11
 - Interrupts for each OUT endpoint from Endpoint 1 to Endpoint 11
 - Start of Frame (SOF)
 - RESET bus state
 - RESUME bus state
 - SUSPEND Mode bus state
 - STALL sent
 - Control byte received
 - Control transfer ended early
 - Packet transmitted
 - Packet received
 - Data underrun
 - Data overrun
 - Invalid token received
 - Empty data packet sent

GOTRAD MAXBLUE BLUETOOTH MODULE USER GUIDE

- The module provides three instances of I2C (I2C0, I2C1, and I2C2). The I2C interfaces are a bidirectional, two-wire serial bus that provide a medium-speed communications network. They can operate as a one-to-one, one-to-many, or many-to-many communications medium. The module supports standard mode, fast mode, and fast mode plus I2C speeds and provides the following I2C features:
 - Master or slave mode operation
 - Supports standard 7-bit addressing or 10-bit addressing
 - RESTART condition
 - Interactive receive mode
 - Tx FIFO preloading
 - Support for clock stretching to allow slower slave devices to operate on higher speed buses
 - Multiple transfer rates
 - Standard mode: 100 kbps
 - Fast mode: 400 kbps
 - Fast mode plus: 1000 kbps
 - High-speed mode: 3400 kbps
 - Internal filter to reject noise spikes
 - Receiver FIFO depth of 8 bytes
 - Transmitter FIFO depth of 8 bytes
- SPI Execute-in-Place Flash (SPIXF) Provides the following features:
 - Up to 48MHz operation in mode 0 and 3
 - Single Slave Select
 - Four wire mode for single-bit slave device communication
 - Dual and Quad I/O supported
 - Programmable Serial Clock (SCK) frequency and duty cycle
 - Slave select assertion and de-assertion timing with respect to the leading and trailing SCK edge
 - Configurable command, address, dummy, and data fields to support a variety of SPI flashes

The SPIXF allows the CPU to transparently execute instructions stored in an external SPI flash. Instructions fetched using the SPIXF are cached just like instructions fetched from internal program memory. You can also use the SPIXF to access large amounts of external static data that would otherwise reside in internal data memory. This device provides support for a wide variety of external SPI flash memory devices.

Prior to using the SPI flash device, you must configure the SPIXF interface.

- SPI Execute-in-Place RAM (SPIXR) is an instantiation of the Quad SPI Interface with the following features:
 - Four SPI modes (mode 0, 1, 2, and 3)
 - Master mode only support
 - Dual SPI Mode with two bidirectional serial data I/O (SDIO) lines
 - High Performance Quad SPI Mode with four bidirectional SDIO lines
 - Programmable Serial Clock (SCK) frequency and duty cycle with 48MHz maximum
 - 32-byte Transmit FIFO, 32-byte Receive FIFO with DMA support backed by a 16KB Data Cache

The SPIXR Master Controller allows the CPU to transparently execute instructions stored in an external SPI SRAM device. Instructions fetched using the SPIXR Master Controller are cached just like instructions from internal program memory. You can also use the SPIXR Master Controller to access large amounts of external data that would otherwise reside in internal data memory.

GOTRAD MAXBLUE BLUETOOTH MODULE USER GUIDE

Prior to using the SPI SRAM device, you must configure the SPIRX interface.

The command used to transfer SPI SRAM data is configured using firmware. Then, the access to SPI SRAM space (either code execution or data) may be performed by firmware. The AHB transaction initiated by the firmware provides address and other transaction critical parameters to control the data transfer from the external SPI SRAM.

- The device provides a 1-Wire master (OWM) that you can use to communicate with one or more external 1-Wire slave devices using a single-signal, combined clock, data protocol. The OWM provides the following features:
 - Flexible, 1-Wire timing generation (required 1 MHz timing base) using the OWM module clock frequency, which is in turn derived from the current system clock source. You can also prescale the OWM module clock to allow proper 1-Wire timing generation using a range of base frequencies.
 - Automatic generation of proper 1-Wire time slots for both standard and overdrive timing modes.
 - Flexible configuration for 1-Wire line pullup modes: options for internal pullup, external fixed pullup, and optional external strong pullup are available.
 - Long-line compensation and bit banging (direct firmware drive) modes.
 - 1-Wire reset generation and presence-pulse detection.
 - Generation of 1-Wire read and write time slots for single-bit and eight-bit byte transmissions.
 - Search ROM Accelerator (SRA) mode, which simplifies the generation of multiple-bit time slots and discrepancy resolution required when completing the Search ROM function to determine the IDs of multiple, unknown 1-Wire slaves on the bus.
 - Transmit data completion, received data available, presence pulse detection, and 1-Wire line-error condition interrupts.

Pin functions: OWM_PE is the 1-Wire Master Pullup Enable

- The module's audio interface allows the device to communicate with external audio devices using standard Inter-IC Sound (I2S) pulse-coded modulation (PCM) and pulse density modulation (PDM) audio interfaces. This allows audio algorithms to be run such as dynamic speaker management (DSM) or ambient noise cancellation (ANC). The I2S PCM mode has the following features:
 - Single 4-wire I2S PCM interface allowing transmit and receive of audio data and is intended to connect to speaker driver devices
 - Four transmit channels and eight receive channels are supported to allow 4-channel DSM
 - Supports two PDM receive channels at the same time as PCM support
 - Sample rates from 8 kHz to 192 kHz
 - Up to two PDM transmit channels at 3.072 MHz
 - Up to two PDM receive channels at 3.072 MHz
 - Interpolation and decimation filtering to save MIPS in the DSP

Bluetooth 5 Low Energy (BT5 LE) Radio

Devices using bluetooth operate in the unlicensed 2.4 GHz ISM (Industrial, Scientific, Medical) band at 2400 MHz–2483.5 MHz. A frequency-hopping transceiver is used to combat interference and fading. It uses 40 RF channels that have center frequencies $2402 + k \times 2$ MHz, where $k = 0, \dots, 39$.

GOTRAD MAXBLUE BLUETOOTH MODULE USER GUIDE

The Maxim Bluetooth Module utilizes the latest version of the Bluetooth wireless communication standard, BT5 LE. The features of BT5 LE include:

- 1Mbps, 2Mbps, and Long-Range coded (125 kbps and 500 kbps) data rates
- Increased broadcast capability
- Advertising packet up to 255 bytes
- On-chip matching network to the antenna
- Provides hardware on-the-fly encryption and decryption for lower power consumption
- Supports mesh networking
- Supports high-quality audio streaming (isochronous)
- Low-power proprietary mode that supports 20 kbps, 40 kbps, 500 kbps-MSK/GFSK, 1Mbps-GFSK

The provided BLE radio is optimized for low-power operation with the following power specifications:

- Higher transmit power up to +9.5dbm
- Low transmit current of 4.3mA at 0dBm at 3.3V
- Low receive current of 3.2mA at 3.3V

The receiver sensitivity with non-ideal transmitter for the BLE radio is:

- 1Mbps: -94dBm
- 2Mbps: -91dBm

Embedded Antenna Characteristics

The data below was collected with the module embedded on the development board. To achieve the performance shown, the module must be embedded to a board with similar dimensions, position, and PCB cutout beneath the antenna. The position on the development board and dimensions are shown in the figure below.

Figure 4: The position and orientation of the module relative to the development board on which the antenna performance was tested. This is the recommended mounting for the embedded chip antenna module.

GOTRAD MAXBLUE BLUETOOTH MODULE USER GUIDE

Figure 5: The figure above shows the recommended PCB copper cutout area in red. This cutout has been done in the module and should be done on the integration board. The square corner pads connect directly to ground.

GETTING STARTED

Procedure

Follow the steps below to verify board operation.

1. Carefully remove the evaluation board from its packaging while maintaining safe ESD practices.
2. Using the provided Micro USB B cable, power the device
3. Connect the Maxim MAX32625PICO# debugger to the eval board via the 10-pin ribbon cable.
4. Open eclipse or compatible IDE and program the board over the debugger with the MAX32666 BSP example projects.

GOTRAD MAXBLUE BLUETOOTH MODULE USER GUIDE

Power Supply

The evaluation board is powered with +5VDC through the VBUS on the Micro-USB connector, pin 3 of the JH4 header, or through the Battery connector JH1. While charging a connected battery, a yellow LED (D3) will illuminate).

Current Monitoring

The evaluation board provides a 2-pin jumper header from 3.3V to the module for convenient current monitoring.

Universal Serial Bus

The provided USB connector allows the user to test various prototype USB slave applications.

UART Interfaces

The evaluation board does not provide any UART translation. The provided UART breakouts will require an external USB-to-UART bridge.

Bluetooth 5 Interface

The evaluation board with the module variant GRBTM-NANT-01 includes an SMA connector for access to the Bluetooth Tx-line.

For the variant GRBTM-ANT-01, the Bluetooth interfaces through the chip antenna embedded onto the module.

JTAG Serial Wire Debug (SWD) Support

SWD can be accessed through an ARM standard Cortex® 10-pin connector (JH2).

Pushbuttons

The pushbutton SW2 manually resets the MAX32666 MCU. Pushbutton SW1 is connected to the GPIO P1.10 of the module.

GPIO LEDs

The indicator lights are controlled by various pins as follows; P0.31 - D4 (Green), P0.30 - D4 (Blue), P0.29 - D4 (Red), P0.28 - D5 (White).

GPIOs

The provided GPIO breakouts function at 3.3V logic levels accessible through various pins on the lateral headers. For more details, refer to the MAX32666 User Guide.

GOTRAD MAXBLUE BLUETOOTH MODULE USER GUIDE

FCC Compliance Statement

This series module has received Federal Communications Commission (FCC) CFR47 Telecommunications, Part 15 Subpart C “Intentional Radiators” modular approval in accordance with Part 15.247 Modular Transmitter approval. The module complies with Part 15 of the FCC Rules and with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: 1. This device may not cause harmful interference, and 2. This device must accept any interference received, including interference that may cause undesired operation. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that the interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to correct the interference using either one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This module is for OEM integrations only. The end-product must be professionally installed in such a manner that only the authorized antennas can be used.

Any changes to hardware, hosts or co-location configuration may require new radiated emission and SAR evaluation and/or testing. Any changes or modifications NOT explicitly APPROVED by GotRad may cause the module to cease to comply with the FCC rules part 15 thus void the user’s authority to operate the equipment on the US market.
